

Client Requirement Document

Field	Details
Project	Manufacturing & Inventory Management System
Client	Al Noor Plastics LLC (Fictional)
Industry	Plastic Products Manufacturing
Odoo Version	19
Prepared For	Fresher Developer Training

Company Background

Al Noor Plastics is a mid-size manufacturer producing plastic bottles, containers, and packaging materials. They have 80 employees, one factory, and supply to 50+ retail clients across the region. They currently manage everything on Excel and want to move fully to Odoo.

Module 1 — Inventory Management

Business Problem

"We have raw materials coming in every day from different suppliers. Sometimes we don't even know what stock we have until we physically go check. We need to know at any time how much raw material we have, where it is, and when it is going to run out."

Requirements

- Set up product categories:
 - Raw Materials
 - Finished Goods
 - Packaging Materials
 - Spare Parts
- Minimum stock reorder rules — auto email alert to store manager when stock falls below minimum level
- Multi-location warehouse setup:
 - Main Store

- Production Floor
 - Finished Goods Store
 - Scrap Area
 - Quality Control Zone (incoming materials must pass through here first)
- Track every stock movement with date, quantity, from/to location, and responsible person
 - Daily stock report emailed automatically every morning at 8am
 - Barcode scanning for stock in and stock out
 - Handle over-receipt from supplier — system should flag and require manager approval
-

Module 2 — Purchase Management

Business Problem

"Right now we call suppliers directly and nothing is documented. We want everything on paper — who we ordered from, how much, at what price, and whether they delivered on time or not."

Requirements

- Supplier master with contact info, payment terms, lead time, and currency
- Full Purchase Order flow — draft, confirm, receive, bill
- Three-way matching: PO vs GRN vs Supplier Invoice
- Partial delivery handling — PO stays open until fully received
- Over-delivery approval workflow
- Auto-generate Goods Receipt Note (GRN) on delivery
- Supplier performance tracking:
 - On-time delivery rate
 - Average lead time
 - Return rate
- Monthly purchase spend report per supplier

Payment Terms to Configure

Supplier	Payment Term
Supplier A	30 days credit
Supplier B	50% advance + 50% on delivery

Supplier	Payment Term
Supplier C	Cash on delivery

Module 3 — Bill of Materials & Manufacturing Orders

Business Problem

"We make different sizes of bottles. Each bottle needs specific raw materials in specific quantities. Right now we calculate this manually on Excel."

Requirements

- Create Bills of Material (BoM) for each product:

Product	Plastic Granules	Color Pigment	Label	Cap
500ml Bottle	45g	2g	1	1
1 Liter Bottle	85g	3g	1	1
5 Liter Container	300g	8g	1	1

- Multi-level BoM — cap and label are also manufactured in-house so they have their own BoM
- When a Manufacturing Order is created, system must automatically calculate and reserve raw materials based on BoM
- If raw material is insufficient, system should block the manufacturing order and show what is missing
- Track manufacturing stages:
 - Raw Material Issued
 - Production In Progress
 - Quality Check
 - Finished Goods Transferred
- Record actual quantity produced vs planned quantity
- Record scrap/waste generated during production with reason

Module 4 — Quality Control

Requirements

- Quality check points at two stages:
 - On raw material receipt (before moving to Main Store)
 - On finished goods (before moving to Finished Goods Store)
 - Each quality check must record:
 - Inspector name
 - Date and time
 - Pass or Fail result
 - Remarks/notes
 - Photos if needed
 - If raw material fails QC — move to Scrap Area and notify Purchase Manager
 - If finished goods fail QC — move back to Production Floor for rework
 - Generate weekly quality report showing pass rate, fail rate, and top failure reasons
-

Module 5 — Sales & Delivery

Requirements

- Customer master with credit limit, payment terms, and delivery address
 - Sales Order flow — quotation, confirm, delivery, invoice
 - Check customer credit limit before confirming sales order — if exceeded, block and notify sales manager
 - Delivery Order auto-created when sales order is confirmed
 - Partial delivery allowed — remaining quantity stays open
 - Auto-generate delivery challan PDF with company logo, product details, and driver name
 - Customer invoicing options:
 - On delivery
 - On milestone (for large orders)
 - Track outstanding payments per customer
 - Monthly sales report showing top 10 customers by revenue
-

Module 6 — Costing & Accounting

Requirements

- Product costing method: **Average Cost (AVCO)**
 - Manufacturing cost must include:
 - Raw material cost
 - Labor cost (machine hours x hourly rate)
 - Overhead cost (electricity, maintenance — allocated as percentage)
 - When finished goods are produced, cost must auto-post to inventory valuation
 - When goods are sold, Cost of Goods Sold (COGS) must auto-post
 - Monthly Profit & Loss report per product category
 - Landed costs — import duties and freight must be added to raw material cost on purchase
-

Module 7 — HR & Payroll

Requirements

- Employee master with department, job position, joining date, and salary structure
- Departments: Production, Quality, Warehouse, Sales, Admin
- Attendance tracking — integrate with biometric device or manual entry
- Leave types:

Leave Type	Days Per Year
Annual Leave	30 days
Sick Leave	15 days
Emergency Leave	3 days

- Payroll components:
 - Basic Salary
 - Housing Allowance
 - Transport Allowance
 - Overtime: 1.5x for weekdays, 2x for weekends
 - Deductions: Absence, Loan repayment

- Generate payslip PDF per employee every month
 - End of Service calculation based on local labor law
-

Module 8 — Reporting & Dashboard

Management Dashboard

Main dashboard visible to management showing:

- Today's production output
- Raw material stock status (green / yellow / red)
- Pending deliveries count
- Outstanding customer payments total
- Top 5 products by sales this month

Scheduled Auto-Reports

Report	Frequency	Recipient
Stock levels	Daily	Store Manager
Production summary	Weekly	Factory Manager
P&L and sales report	Monthly	CEO

General Technical Requirements

- All masters (products, suppliers, customers) must be importable via Excel
- All major documents must be printable as PDF with company logo:
 - Purchase Order
 - Goods Receipt Note
 - Sales Order
 - Delivery Challan
 - Invoice
 - Payslip
- Arabic language support for all printed documents
- Multi-currency support: USD and AED

Role-Based Access Control

Role	Access
Store Manager	Inventory only
Purchase Manager	Purchase + Inventory (view)
Sales Executive	Sales only
Factory Manager	Manufacturing + Inventory (view)
Accountant	Accounting only
CEO	Full read access to everything

Implementation Phases

Phase	Modules	Duration
Phase 1	Inventory + Purchase	2 weeks
Phase 2	Manufacturing + BoM + Quality Control	2 weeks
Phase 3	Sales + Delivery	1 week
Phase 4	Accounting + Costing	2 weeks
Phase 5	HR + Payroll	1 week
Phase 6	Dashboard + Reports + Access Rights	1 week

Total estimated duration: 9 weeks

Fresher Task Checklist

Phase 1 Tasks

- ☐ Install and configure Inventory module
- ☐ Create product categories
- ☐ Set up warehouse and locations
- ☐ Configure reorder rules and email alerts

- ☐ Install and configure Purchase module
- ☐ Create supplier records with payment terms
- ☐ Test full PO to GRN flow
- ☐ Configure three-way matching
- ☐ Demo to trainer before moving to Phase 2

Phase 2 Tasks

- ☐ Install Manufacturing module
- ☐ Create all Bills of Material
- ☐ Test multi-level BoM
- ☐ Create and process a Manufacturing Order end to end
- ☐ Configure Quality Control checkpoints
- ☐ Test pass and fail flows in QC
- ☐ Demo to trainer before moving to Phase 3
